

Konni Divya

Software Engineer | Full-Stack, Systems & AI Integration

Phone: 9000204684 | Email: sridivya1912@gmail.com | LinkedIn: KonniDivya | GitHub: Divya-shr | LeetCode: divvzz_1912

Education

Bachelor of Technology in Computer Science and Engineering

8.10 CGPA

Malla Reddy University, Hyderabad

2023 – 2027

Relevant Coursework: Data Structures & Algorithms, Operating Systems

Intermediate (Maths, Physics & Chemistry)

73.5%

Sri Chaitanya Jr. Kalasala, Hyderabad

TSBIE – 2023

Secondary Education

95.0%

Kenedy Vidya Bhavan High School, Hyderabad

SSC – 2021

Technical Skills

Languages: Java, C++, Python, JavaScript (ES6+), SQL

Web Development: HTML, CSS, JavaScript, React.js, Next.js, Redux Toolkit, Tailwind CSS

Backend Frameworks: Node.js, Express.js, RESTful APIs, FastAPI

Cloud & DevOps: AWS, Docker, Linux, Jenkins, CI/CD

Testing & Debugging: Jest, PyTest, Postman (API Testing), Telemetry & Trace Analysis, Logging, Performance Profiling

Databases: PostgreSQL, Supabase, MySQL, MongoDB

Development Tools: Git, GitHub, VS Code

Projects

Automotive AI Cockpit | GitHub | Live Demo

Role: Full Stack & AI Developer

- Engineered custom SVG telemetry gauges (speed, RPM, battery SOC, coolant temp) and a threshold-based TPMS fault-detection system driven by simulated CAN bus signal data.
- Integrated Google Gemini API to simultaneously diagnose multiple active DTCs, returning severity-tiered root-cause analysis (Critical/High) and an executive risk assessment in **roughly 4–5 seconds** per query.
- Designed a fault-tolerant architecture with async error boundaries and fallback state handlers, plus a live network status indicator for graceful degradation on API failures.
- Technologies: React.js, Tailwind CSS, Google Gemini API, REST APIs, JavaScript*

Scholar Sync | GitHub | Live Demo

Role: Full Stack Developer

- Built and deployed a full-stack researcher-matching platform (Next.js, React, Python, PostgreSQL, Supabase), live in production with **15+ real users**.
- Automated PDF/DOCX resume parsing and Google Scholar scraping via Puppeteer, achieving a **near-100% completion rate** from upload to full match.
- Secured Next.js API routes with file upload handling and unit tests to ensure reliable production performance.
- Technologies: Next.js, React, Python, Supabase, PostgreSQL, Puppeteer*

Smart Inventory Reordering System for Quick Commerce | Hackathon Project

Role: Backend & Data Pipeline Engineer

- Prototyped a demand-forecasting pipeline using sample POS transaction data to model SKU stock-level prediction for dark-store warehouses.
- Deployed Apache Kafka and Apache Spark for low-latency stream processing to simulate distributed data ingestion across warehouse nodes.
- Trained a TensorFlow demand-forecasting model and simulated automated reorder-point calculations via mock WMS API integration.
- Technologies: Python, Apache Kafka, Apache Spark, TensorFlow, Node.js, REST APIs*

Achievements

200+ Problems Solved | LeetCode

- Solved **200+ data structures and algorithms problems**, demonstrating strong problem-solving fundamentals.

Training & Certifications

Full Stack Web Development Track | Decode Labs (Mentor-Guided Virtual Program) July 2026 – August 2026

- Developed a website progressively over a 4-week mentor-guided track: static structure with HTML/CSS (Week 1), responsive UI implementation (Week 2), and full interactivity using JavaScript (Week 3).

Google Cloud Generative AI Skills Training | AICTE EduSkills

March 2026

- Completed Google Cloud Skills Boost labs and badges covering generative AI fundamentals and Google Cloud tooling, as part of a selective AICTE EduSkills virtual program.

AWS Cloud Foundations Certification | AWS Academy

March 2026

- Validated competency in cloud architecture, core security models, and scalable system infrastructure.
